(54) Title: RECONFIGURABLE USER INTERFACE

(57) Abstract: A user interface for receiving inputs from a user includes a touch sensitive surface having a plurality of regions where each region corresponds to a switch having a function. The user interface also includes an interface disposed on the touch sensitive surface over at least one of the plurality of regions. The interface comprises a material that is at least partially transparent and that is configured to provide tactile feedback to the user. The interface may comprise at least one button disposed over a region. A function corresponding to a particular region may be reconfigured. The touch sensitive surface may emit light that is visible through the interface. The interface may further include a plurality of buttons disposed over the plurality of regions wherein the light is selectively provided to each of the plurality of buttons. The touch sensitive surface may include a display that is configured to provide text and graphics that are visible through the interface. The user interface may be mounted in, for example, a vehicle.
